We specialize in Pigment printing, Reactive dyeing and finishing of COTTON / JUTE / FLEX / VELVET / LINEN / SATINS FABRICS for Bed Linen, Table linen, Bath linen, Curtains & Home furnishing.

We offer a unique combination of traditional skills and innovative thinking. Our versatile packages allows customers' direct involvement for the chance to develop their own designs and colour-ways. The result is a finished product of a very high standard.

We are entirely self-contained, with full facilities for Bleaching, Dyeing, Printing, Designing, Sampling, Finishing and Warehousing. We are also able to offer our customers an extensive choice of ground cloths as part of our package on a cloth with Dye/ Print basis. We have developed our own facilities to integrate colour graphics with the pigment printing process, so that we can produce fabric samples which directly simulate the finished print run.

Printing Capabilities

- Printing_tables Hot/ Cold
- Up to 3200mm wide [grey width]
- Up to 15 screens per designs
- Pigments printing
- Screen repeat sizes 20 - 180 cms

Dyeing Capabilities

- Short- 100mtr. run dyeing
- Multi width dyeing 36" to 130"
- Jumbo run dyeing
- Using Reactive dyes
- Using Sun fast dye

- Silicone finishing
- Flame retardant
- High gloss calendaring
- Compressive width-wise shrinking
- Chemical finishing

- Over 5,000 [OWN] designs

Colour Separation

- Hand & CAD colour separation

Sampling

Pre-Engraving and Bulk sampling

DYEING

AT Suruchi we can offer piece-dyeing and finishing service either on customers' own ground cloths or from the wide selection available in our stock.

We have specialized DYEING facilities for Cotton Percal, Duck, Satins [200 TC to 1000 TC], Canvas, Haringbone, Sheetings, Poplins, Voils, Cambric, Linen, Jute, Casement Denims, Velvet, Flex etc.

The Jigger dyeing department [with 5 Jumbo jiggers for Dyeing fabrics from 70" to 126" wide fabrics and 2 Jumbos for upto 63" fabrics] jig dyes the cotton fabrics using **100% Azo free** reactive dyes or basic dyes.

Our piece-dyeing service enables customers to create the ground shade for printing or dye solid shades to co-ordinate with printed ranges as well as reactive dyed grounds for discharge style prints.

The benefits of having an in-house piece-dye plant are also realized by our customers who wish to pre-dye grounds for printing or solid dyed coordinates.

COLORING & SAMPLING

Our Research & Development wing's experienced colorists work closely with our customers from initial sampling to the final printed product. We use a comprehensive colour atlas. This is incorporated into our own 'in-house' computerised colour graphics system, generating an infinite number of options.

Our colour graphics service is available free to customers. Our CAD coloring system allows customers to experiment with any number of colour ways and quickly receive hard copy to help them reach a final decision. They can then request fabric samples that will be reasonably accurately matched with the finished product.

PIGMENT PRINTING

Pigment dyes are used widely in the Bed Linen and other Home furnishing trade as they have the best all round wet, light and abrasion fastness characteristics. This is because they are permanently absorbed into the fabric (using our unique polymerizing facility) and not a coating on its surface. This greater depth of colour lets the natural beauty of the cloth shine through for longer time period. Pigment printed **POLYMERIZED** fabrics feel softer and resist wear due to washing much better than any other types.

We offer multi-colour Pigment printing on a commercial scale as well as sampling scale. The flexibility of our facilities i.e PRINTING WIDTHS - (A) 30 TO 150 Cms. (B) 150 TO 230 Cms. (C) 230 TO 274 Cms. allow for long print runs as well as catering for very short 60 mtr. sampling runs when necessary.

PRINTING STYLES

.We can print up to 15 colours in different repeat sizes [from 30 cms to 180 cms.] on tables with flat screens.

Our Printing tables allow us to print high number of colours on runs as low as 60 meters.

The flexibility of this facility makes it possible to reproduce the 'bloom' that was the hallmark of hand block printing.

ARCHIVES

Our purpose-built Archive department contains over 5,000 designs, We will lease design documents to customers for their exclusive use; the customer is free to reproduce the original design, or to adapt it to suit the modern market.

CUSTOMER FACILITIES

For customer convenience whilst sampling and printing we pride ourselves in offering well appointed, spacious and comfortable facilities. The customer studios provide all the necessary communication links, allowing a means of working whilst away from the office.

WAREHOUSING

Our In-house warehousing facility [Grey and finished fabrics] enables customers to call off stock as they need it, for immediate production [dyeing & printing] as well as dispatch.

COST & PPRODUCT

Our prices are most competitive for the quality products produced and offered by us.
